Product Concept

Our product is a news platform that offers brief summaries of breaking news from various sources. Users can quickly access news highlights in short snippets, providing a user-friendly and time-saving method to stay informed without extensive reading or navigation. Our goal is to provide a smooth news consumption experience that keeps users informed about the latest news.

Briefly

From Problem To Solution

Current Solution

News applications overwhelm users with generic information, whereas users desire updates on topics that genuinely pique their interest.

What Makes Us Better?

Our platform offers personalized feeds to users, delivering concise summaries of the latest news articles. This ensures that you receive content tailored to your interests in a brief and engaging manner.

REDUCE. SCROLLING. TIME.

Your most precious asset is time; our platform allows you to reduce scrolling time and accomplish more in less time.

Briefly

MVP Scope

- 01** Stay updated in less time by subscribing to a news feed that offers brief summaries of news and articles from three different sources.
- 02** Users can choose from four different categories and create a news feed that is tailor-made for them. This way, users can stay informed on the topics that matter most to them.
- 03** Users can report about harmful or inaccurate information that they encounter by reading our concise articles summaries , for help reduce toxicity content and prevent the spread of fake news.

Briefly

App Features

- 01** User authentication via Google, Facebook, and email to establish a streamlined authentication procedure.
- 02** Users can search for an article via a search bar.
- 03** Users can personalize their home feed by selecting and adjusting their preferred interest topics.
- 04** Users have the option to bookmark their preferred articles for easy access in the future through the bookmarked articles screen.
- 05** Users can access the original sources of selected summarized article through an external link.

Briefly

Proposal Description

Mobile APP & Backend API Service

The app will include a user authentication process with choices such as Gmail, Facebook, and email. Users will be able to scroll through a list of articles, read them, and also have the option to bookmark selected articles for later viewing.

Scrapers Service

Our platform utilizes articles from three primary news websites through a web scraping service that will be integrated with our backend application for storing this data.

AI LLM Integration Service

Our platform will utilize a Large Language Model (LLM) for effective article summarization and employ a text similarity algorithm to merge related ones, enhancing the reading experience

Briefly

Project Deliverables

- 01** Mobile App for iOS and Android Using React-Native
- 02** Backend API for the mobile app.
- 03** Web Scrapers services.
- 04** LLM model integration for summarizing news articles.
- 05** Deployment Documentation
